

ABOUT US

Who is RASP Inc?

RASP Inc. is a System Integrator

What does that mean?

That means we offer many different abilities and services to companies that need our assistance.

I still don't understand. What types of abilities and services do you offer?

We offer services such as Engineering, Design, Programming and Manufacturing.

I think I know what most of your services mean but can you explain them.

Sure! Take a look at the info to the right.

JOBS &
CAREERS
SYSTEM INTEGRATION

ENGINEERING

An engineer is typically someone that went to college and has a four-year degree. There are different types of engineers but for us they are usually electrical engineers. For us, an engineer will think through a problem and come up with electrical solutions. But they need to make sure everything is safe and follows industry codes.

PROGRAMMING

A programmer for us is someone that programs devices to do something. They may program a machine to perform a certain function or program a display to show you what is going on.

Programmers usually have a four-year degree or many years of experience and training. For us the programmer is typically the same person as the engineer.

As you can see, the same person usually does the engineering, designing and programming. That is not always the case in other companies.

DESIGN

A designer in our company is the person that takes the solution and puts all the information together to make it happen in real life. They will select a list of parts called a bill of materials and they will make drawings called schematics. Most often engineering and designing are done by the same person.

MANUFACTURING

We also build the products, which is called manufacturing. After something is engineered and designed it then needs to be constructed. To do this we take all the parts and assemble them onto a panel. We then integrate all of the components together with wires to make them work electronically.

Are there any other types of jobs
in your company?

Absolutely - The main jobs and
careers I spoke about are
services that we offer our
customers. But there are many
other important jobs required to
make a company run properly.
So keep these in mind as you may
do any one of these someday.

Electrical Designer
Electrical Engineer
Facilities maintenance
Human Resources
Installation Technician
Janitorial
Office Manager
Panel Builder
Production Manager
Programmer
Purchasing Agent
Quality Manger
Safety Manager
Sales and Marketing
Service Technician
Shop Manager
